

All under control – with steering column switch assemblies by febi bilstein

The steering column switch assemblies are fitted on each side between the steering wheel and the dashboard, creating a central interface between vehicle and driver. Amongst other things, they serve to operate indicators, vehicle lighting, cruise control, retarder, windscreen wipers and windscreen washer function.

Since they are in constant use, the quality of the steering column switch assembly is of utmost importance. Only the use of high-quality materials and flawless processing of the mechanical and electronic components can guarantee the reliable function and high durability of steering column switch assemblies by febi bilstein.

febi bilstein has the most extensive range of steering column switch assemblies in the independent aftermarket, offering the right replacement part for virtually any vehicle – of course, in tested OE matching quality.

For an optically coordinated dashboard, febi bilstein offers matching steering column switch assemblies in grey and black under reference numbers febi 19698 and febi 21833.
