

## Clutch Release Forks for Volvo Trucks

The clutch release fork is exposed to frequent strain and is correspondingly susceptible to wear. Volvo clutch forks febi 35210 and 35211 cover a wide range of models up to and including the current 4th generation of the FH.

### Important

**In the case of a highly stressed part such as the clutch release fork, maximum emphasis should be placed on quality. Premature failure can result in high secondary costs as the vehicle is no longer roadworthy. It is also necessary to dismantle the transmission in order to replace the clutch release fork which requires significant time input and expenditure.**

febi bilstein offers the required quality:

- The clutch release fork is manufactured in-house at our production facilities in Ennepetal in accordance with strict requirements for precision and fitting safety
- The functional dimensions are guaranteed by in-house production, machining and quality assurance
- Additional examinations of the material and structure ensure absolute certainty when selecting the cast material

febi 35210

Reference no. 3191966  
to fit Volvo FH12 (G1), FH16 (G1), FH565, FM7, FM12 (G1), NH12, NH565

febi 35211
